industry best practices

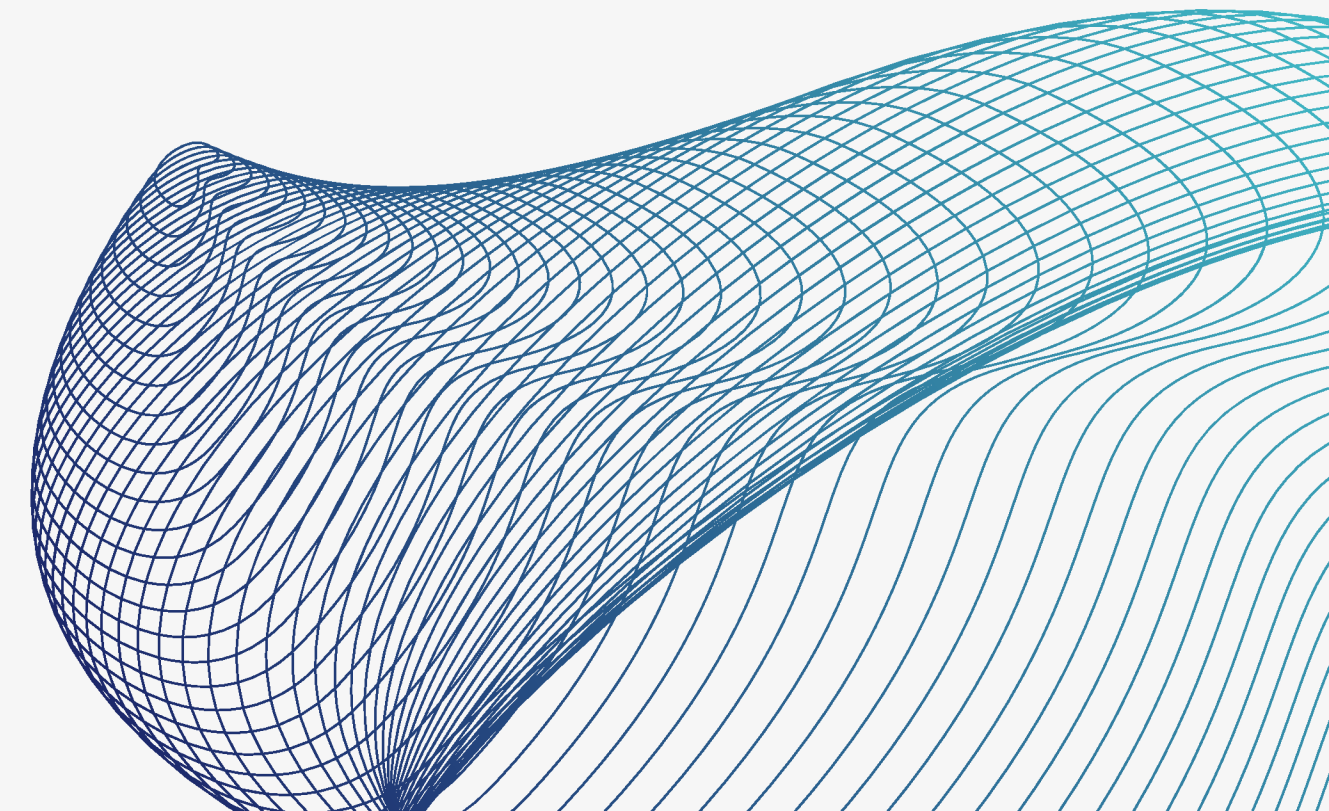

There's a saying that there's nothing new under the sun, and over the past 200 years of industrial evolution, the best methodologies have been established for various processes. Focus on identifying and implementing the best practices in enterprise processes that can be seamlessly integrated into an ERP system

<transzeta>

4m evolution to evaluate the power

For any manufacturing or engineering company, an ERP system should account for the following 4 M's: **M**oney, **M**aterial, **M**achine, and **M**anpower.

<transzeta>

3p methodology

to select right erp application

selecting the right Enterprise resource planning (ERP) application is crucial for any organization's success. However, with so many options available in the market, it can be overwhelming to choose the perfect fit for your business needs

Proprietary

no ERP application should be dependent on a single person or a small team. It should also not be risky due to political, environmental, social or technological reasons

Power

it should have all 4 m's

Penny

TCO and ROI of the ERP application should be justifiable
